MILITARY SPECIFICATION

COAT, WOMAN'S, (PANT SULT)

This specification is approved for use within the Department of the Air Force, and is available for use by all Departments and Agencies of the Department of Defense.

- 1. SCOPE
- 1.1 <u>Scope</u>. This specification covers the requirement for a woman's, polyester/wool, tropical coat.
- 1.2 Classification. The coat shall be of one type furnished in the following classes, as specified (see 6.2):

Class 1 - Polyester/Wool, USAF Blue 1578, 10.00 oz. Class 2 - Polyester/Wool, USAF Blue 1608, 10.25 oz.

1.2.1 <u>Lengths and sizes</u>. The coat shall be furnished in the following lengths and sizes, as specified (see 6.2):

	3	Schedule	of	lengths	and	sizes		
Short	6	8	10	12	14	16		
Regular	6	8	10	12	14	16	18	20
Long	6	8	10	12	14	16	18	

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: ASD/ENES, Wright-Patterson AFB OH 45433-6503 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter

AMSC N/A FSC 8410

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

2.1.2 Other Government documents. The following other Government document forms a part of this specification to the extent specified herein. Unless otherwise specified, the issues shall be those in effect on the date of the solicitation.

LAWS AND REGULATIONS

Rules and Regulations Under the Wool Products Labeling Act of 1939

(Application for copies should be addressed to the Superintendent of Documents, Government Printing Office, Washington DC 20402-0001.)

(Copies of specifications, standards, and other Government documents required by contractors in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

2.2 Other publications. The following documents form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of the documents which are DoD adopted shall be those listed in the issue of the DoDISS specified in the solicitation. Unless otherwise specified, the issues of documents not listed in the DoDISS shall be the issue of the nongovernment documents which is current on the date of the solicitation.

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

ASTM D 3951 Standard Practice for Commercial Packaging

(Application for copies should be addressed to the American Society for Testing and Materials, 1916 Race St., Philadelphia PA 19103-1187.)

THE COLOR ASSOCIATION OF THE UNITED STATES

Department of Defense (DoD) Standard Color Card of Official Standardized Shades for Sewing Threads

(Application for copies should be addressed to The Color Association of the United States, 343 Lexington Ave., New York NY 10016-0927.)

(Nongovernment standards and other publications are normally available from the organization which prepare or which distribute the documents. These documents also may be available in or through libraries or other informational services.)

2.3 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this specification shall take precedence. Nothing in this specification, however, shall supersede applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

- 3.1 Standard samples. Standard samples, when furnished (see 6.3), are solely for guidance and information to the contractor. Variations from the document may appear in the samples, in which case the document shall govern.
- 3.2 <u>First article</u>. When specified in the contract or purchase order, a sample shall be subjected to first article inspection (see 4.4 and 6.2).

3.3 Materials (see 6.5)

- 3.3.1 Basic material. The basic material for the class 1 coat shall be USAF Color Blue, Shade No. 1578 conforming to type III, class 3 of MIL-C-21115. Material for the class 2 coat shall be USAF Color Blue, Shade No. 1608 conforming to type III, class 4 of MIL-C-21115.
- 3.3.2 Rayon cloth. The material for the body lining and the sleeve lining shall conform to class 1 of MIL-C-368 and shall be USAF Color Blue, Shade No. 1086 (see 6.3).
- 3.3.3 Cotton-warp, hair-wool-filling cloth. The material for the front interlining and the shoulder loop interlining shall conform to type III, class 2 of MIL-C-297.
- 3.3.4 Sleeve-head pads. The sleeve-head pads shall conform to type IV of MIL-P-15064.
- 3.3.5 Polyester and cotton twill cloth. The material for the patch pocket lining, the pocket stays, and bust dart interlining stays shall be black and shall conform to class 1 or 2 of MIL-C-43718.
- 3.3.6 Cotton wigan cloth. The material for the sleeve bottom interlining shall conform to type I of MIL-C-16375 except that the requirement for breaking strength shall not apply. The color of the material for the sleeve bottom interlining shall be natural.
- 3.3.7 Wool flannel cloth. The material for the under collar shall conform to A-A- $\overline{50067}$ and shall be USAF Color Blue, Shade No. 1578 (see 6.3).

- 3.3.8 Braid. The braid for the hanger shall be either cotton or rayon, flat braid. The braid shall be 1/8 to 3/16 inch wide, shall have a breaking strength of not less than 50 pounds in the warp direction, shall approximately match the color of the basic fabric or shall be black, and shall show good colorfastness to crocking and wet dry cleaning.
- 3.3.9 Cotton buckram cloth. The material for the under collar interlining shall conform to type I, class 2, natural or bleached of CCC-C-438 except that the method for shrinkage shall be 5580 of FED-STD-191.
- 3.3.10 Cotton tape. The tape for the armholes, the gorge, the patch pockets, and the bridle at the break line shall be preshrunk and shall conform to type I, class 1 or 2 of DDD-T-86 except that the requirements pertaining to nonfibrous content shall not apply. The tape for the armholes, the gorge, and the patch pockets shall be 1/4 inch wide and the tape for the bridle at the break line shall be 5/8 inch wide.
- 3.3.11 Cross-cut tape. The cross-cut tape for the stays for the front interlining, for the back of the neck gorge of the fronts, and for the fronts of the coat shall be made of polyester and cotton twill cloth. The polyester and cotton cloth shall conform to class 2 of MIL-C-43718 except that the requirements for nonfibrous material, seam efficiency, and colorfastness shall not apply and that the cloth shall be undyed or dyed. The cloth shall be cut across the width in strips that are $1/2 \pm 1/16$ inch wide. The ends of the strips shall be abutted or overlapped and stitched with diagonal stitching. The diagonal stitching shall be a minimum of 8 stitches per inch with a bight (throw) of 1/8 to 3/16 inch. The edges of the cross-cut tape shall be treated with a synthetic resin to prevent raveling.
- 3.3.12 <u>Labels</u>. The coat shall have a combination personal identification, identification, and instruction label, and a size label conforming to DDD-L-20. The colorfastness to dry cleaning requirements of DDD-L-20 shall apply.
- 3.3.12.1 <u>Combination personal identification, identification, and instruction label</u>. The combination personal identification, identification, and instruction label for the coat shall conform to type VI, classes 10 and 15 and shall include the following information:

```
Name Service No. Coat, Woman's (Pant Suit) 8410-00-000-0000 (Example) \underline{1}/ DLA-100-00-0000 (Example) \underline{1}/ Wool Products Act (information as applicable) \underline{1}/ Contractor \underline{1}/ CLEANING INSTRUCTIONS
```

DRY CLEAN ONLY

 $\underline{1}/$ The contractor shall include the applicable information.

- 3.3.12.2 <u>Size label</u>. The size label shall conform to type VI, class 2. The sizes and lengths (short, regular, and long), shall be abbreviated as follows: 12S, 12R, and 12L.
- 3.3.13 Threads. All colored threads shall be DoD Shade Navy Blue AT, C.A. 66060 (see DoD Standard Color Card). The dyed thread shall show fastness to light, perspiration, and wet dry cleaning equal to or better than the standard sample (see 6.3). When no standard sample is available, the dyed thread shall show "good" fastness to light, perspiration, and wet dry cleaning.
- 3.3.13.1 Cotton thread. The cotton thread for seaming the coat shall be type IC2, ticket No. A or B, 3 ply; for edge and top stitching shall be type IC2, ticket No. 00, 3 ply; for seaming the front interlining shall be type IA2 or IB2, ticket No. 70, 2 ply; for tacking sleeves and armholes shall be type IA2 or IB2, ticket No. 30, 3 ply; for sewing on buttons shall be type IA3 or IB3, ticket No. 12, 16 or 20, 4 ply; and for quilting and blindstitching shall be type IA2 or IB2, ticket No. 70, 2 ply conforming to V-T-276.
- 3.3.13.2 <u>Silk thread</u>. The silk thread for hand felling shall be type III, ticket A or C; for machine felling shall be type I, tickets A and O; and for sewing the buttonholes shall be type I, tickets A, B, and C conforming to V-T-301.
- 3.3.13.3 Polyester thread. The polyester thread for padding the lapels and the bridle, if used, and for machine felling and blindstitching shall conform to type I, class 1, letter size A of V-T-285.
- 3.3.13.4 Nylon thread. The nylon thread for hand felling shall conform to type IV, sizes A and C, 2 ply of V-T-295. If an automatic machine that sews shank buttons imitating hand sewing is used, the thread shall be nylon waxed monocord, special no. 4, having a breaking strength of 11 pounds and a minimum length per pound of 3,250 yards. The nylon thread for machine felling and for sewing buttonholes shall be a nylon, tailoring, soft finish thread conforming to the requirements specified in table I. The nylon thread shall have good colorfastness to wet dry cleaning, light, and perspiration when tested as specified in V-T-295.
- 3.3.13.5 <u>Temporary basting</u>. Except for the option that is specified in 3.3.13.5.1, the thread for temporary basting shall be a commercial cotton or the same thread that is used in seaming coats.
- 3.3.13.5.1 Monofilament synthetic thread. A monofilament synthetic thread may be used for only the basting operations where the thread is required to be removed. If a monofilament synthetic thread is used, the coat shall subsequently be given a treatment with a dry cleaning agent in which the monofilament synthetic thread is soluble. Any residue remaining on the coat after the dry cleaning process shall be brushed off or removed.

TABLE I. Nylon thread.

Size <u>1</u> /	Ply	Minimum Length Per Pound (Yards)	Minimum Breaking Strength (Pounds)	Maximum Elongation (Percent)
0	2	16,000	3.0	35
В	2	11,000	4.0	35
F	2	3,800	12.0	35

- 1/ Size O shall be used for machine felling and sizes B and F shall be used for sewing buttonholes.
- 3.3.14 Gimp. The gimp for reinforcing the buttonholes shall be a no. 3 silk gimp with a cotton core, soft or hard finish or cotton conforming to type II, size 8 of V-T-280. The gimp shall be 100 +5 yards per ounce. The color of the gimp shall approximately match the basic fabric and shall have good colorfastness to dry cleaning.
- 3.3.15 Shoulder pads. The shoulder pads shall conform to type III, class 4 of MIL-P-15064 or they shall be commercially made needle punch shoulder pads conforming to all of the applicable requirements for type III, class 4 of MIL-P-15064 except for the following requirements: The commercially made needle punch shoulder pads shall consist of three plies of polyester wadding, 4.5 ounces per square yard, and one ply of interlining that is 5 inches long by 2-1/4 inches wide. The interlining shall be placed between the top ply and the second ply of the polyester wadding.
- 3.3.16 <u>Buttons</u>. The buttons shall conform to type I, style 1, size 30 lines, hopper back or short shank of MIL-B-3461.
- 3.4 <u>Design</u>. The coat shall be semi-fitted, single-breasted, and fully lined. The coat shall have a three-button front closure, shoulder loops, semi-peak lapels, an open collar, and two lower front patch pockets.
- 3.5 Patterns. Standard patterns shall be furnished by the Government. The standard patterns show size, seam allowances, shape and placement of patch pockets, directional lines for cutting, and are marked or notched for proper placement and assembly of the component parts. The standard patterns have a seam allowance of 3/4 inch for the center back seam, for the seams joining the backs to the sides, and for the seams joining the side lining to the back lining; 3/8 inch for the seams joining the sides to the fronts and for the seams joining the side lining to the front lining; 1/4 inch for sewing the facing to the fronts except for sewing the assembled lining to the back edge of the front facings to the notch at the bottom of the front facings; 1/2 inch for the center back lining seams; and 3/8 inch for sewing the assembled lining to the back edge of the facings to

the notch at the bottom of the front facings and for any other seams. The standard patterns shall not be altered in any way and are to be used as a guide for cutting the contractor's working patterns. The working patterns shall be identical to the Government patterns.

- 3.5.1 <u>Pattern parts</u>. The component parts of the coat shall be cut from the materials specified in accordance with the number of parts indicated in table II.
- 3.6 Construction. The construction of the coat shall conform in all respects to the requirements specified in table III and herein. Figures are furnished for guidance and information only. If there are any inconsistencies between the specification and the figures, the specification shall govern.
- 3.6.1 Stitches, seams, and stitchings. All stitches, seams, and stitching shall conform to FED-STD-751. The type of seams, stitchings, and stitches per inch shall be as specified in table III. Seam allowances shall be maintained with seams sewn so that no raw edges, run-offs, pleats, puckers, or open seams occur. When two or more seam or stitch types are specified for the same part of the operation, any one may be used. Where stitch type 401 is used, the looper (underthread) shall be on the inside of the coat.
- 3.6.1.1 Type 301 stitching. The ends of all stitchings shall be backstitched or overstitched not less than 1/4 inch except where ends are turned under or caught in other seams or stitching. The ends of a continuous line of stitching, except on labels, shall overlap not less than 1/2 inch. The ends of continuous lines of stitching on labels shall be overlapped not less than three stitches. Thread breaks (all stitch types) shall be secured by stitching back of the break not less than 1/2 to 1 inch.
- 3.6.1.1.1 Repairs of type 301 stitching. Repairs of type 301 stitching shall be as follows:
- a. When thread breaks, skipped stitches, run-offs, or bobbin runouts occur during sewing, the stitching shall be repaired by superimposing and restarting the stitching a minimum of 1/4 inch back of the end of the stitching (see NOTE).
- b. Except for prestitching, thread breaks, two or more consecutive skipped or run-off stitches noted during inspection of the item (in-process or end item) shall be repaired by overstitching. The stitching shall start a minimum of 1/4 inch in back of the defective area, continue over the defective area, and continue a minimum of 1/4 inch beyond the defective area onto the existing stitching. Loose or excessively tight stitching shall be repaired by removing the defective stitching without damaging the materials and restitching in the required manner (see NOTE).

NOTE: When making the above repairs, the ends of the stitching are not required to be backstitched.

TABLE II. List of pattern parts.

Material	Pattern Nomenclature	Cut Parts
Basic cloth	Front	2
(see 3.3.1)	Back	2
(500 5.3.1)	Top sleeve	2
	Under sleeve	2
	Top collar	1
	Shoulder loop	2
	Front facing	2
	Side	2
	Patch pocket	2
Rayon cloth	Front lining	2
(see 3.3.2)	Side lining	2
	Back lining	2
	Top sleeve lining	2
	Under sleeve lining	2
Cotton-warp, hair-	Front interlining	2
wool filling cloth (see 3.3.3)	Shoulder loop interlining	2
Polyester and cotton twill cloth (see 3.3.5)	Patch pocket lining	2
Cotton wigan cloth (see 3.3.6)	Sleeve bottom interlining	2
Wool flannel cloth (see 3.3.7)	Under collar $1/$	2
Cotton buckram cloth (see 3.3.9)	Under collar interlining $\underline{1}/$	2
Shapers	Finished shoulder loop Finished collar and lapel <u>2/</u> Lapel Finished patch pocket	
Marker	Bust dart	

^{1/} One part with the center seam allowance omitted may be cut in lieu of two parts.

^{2/} The finished collar and lapel shaper shall be separated at the gorge line into two parts.

- 3.6.1.2 Types 101, 102, 103, 304, 306, 401, and 801 stitching. Thread tension shall be maintained so that there will be no loose or excesssively tight stitching resulting in puckering of the material. All repairs shall be in accordance with 3.6.1.1.1. Type 301 stitching may be used to repair type 401 stitching.
- 3.6.1.3 Automatic stitching. Automatic machines may be used to perform any of the stitch patterns provided the requirements for the stitch patterns, stitches per inch, and size and type of thread are met; and at least three tying, overlapping, or backstitches are used to secure the ends of stitches.
- 3.6.1.4 Thread ends. All thread ends shall be trimmed to 1/4 inch maximum length.
- 3.7 Manufacturing operations requirements. The coat shall be manufactured in accordance with operation requirements specified in table III. The contractor is not required to follow the exact sequence of operations listed unless otherwise specified. Any additional basting or holding stitches used to facilitate manufacture are permissible provided the thread is removed or does not show in the finished coat.
- 3.7.1 <u>Shade and size marking</u>. The component parts of the coat shall be marked, ticketed, or bundled to insure a uniform shade and size. Any method may be used except:
 - a. Corrosive metal fastening devices.
- b. Adhesive type tickets which discolor or adhere to the material upon removal of tickets.
- NOTE: The use of an ink pad numbering machine, rubber stamp, or pencil is allowed provided the numbering does not show on the outside of the coat and wherever possible is covered by the seam allowance.
- 3.7.2 Pressing. Unless otherwise specified herein, all pressing shall be accomplished by a heated pressing iron or machine. A steam pressing machine shall be used for Operations 15.a, 20, and 36.a through 36.k of table III.
- 3.8 <u>Finished measurements</u>. The measurements of the finished coat shall conform to the requirements specified in table IV.
- 3.9 Workmanship. The finished coat shall conform to the quality of product established by this document. The occurrence of defects shall not exceed the acceptable point value.

TABLE III. Manufacturing operations.

		Stitch	Seam and Stitching	Stitabas	The	ead
No.	Description of Operation	Type	Type	Per Inch	Top	Lower
1.	Cut parts.					
	 a. Cut the parts of the coat as specified herein and in strict 					
	accordance with the patterns					
	which show size, directional lines for cutting, markings, and notches					
	for assembly of all parts. Mark					
	each part in the top ply of the main lay of each material with the					
	size of the coat. Do not use				1	
	drill marking, perforated paper					
	markers, or plain paper markers on the basic fabric. Felt back					
	paper markers may be used on the					
	basic fabric.					
	b. Spread the basic fabric face					1
	to face, that is, with the face of					
	one ply over and against the face of the next ply below. Take care					
	in spreading the basic fabric so					
	that the plies are not stretched and so that one side of the lay is					
	even. Lay up the basic fabric in					
	uniform widths and lengths not more than 80 single plies (40					
	coats) high. Cut all parts that					
	are made of the basic fabric from					
	one piece of the basic fabric. Cut the top collar and the					
	shoulder loops across the width of					
	the basic fabric.					
	c. Unless otherwise specified					
	herein, cut all parts of the coat that are made of the rayon cloth					
	from one piece of rayon cloth.					
	The sleeve lining may be cut from					
	ends of the rayon cloth provided that the parts of sleeve lining					
	match each other in shade and					
	match the other parts cut of the

2.	Replace defective parts.					
	Remove any parts containing material defects or workmanship damages that are classified as defects in MIL-STD-1608 from production during the spreading, cutting, and manufacturing process and replace with nondefective and properly matched parts.					
3.	Mark parts.					
	Mark, ticket, or bundle the cut parts to insure a uniform shade and size throughout the coat (see 3.7.1). Sew-on type tickets may be used to shade mark the basic fabric. Parts that are cut from ends, except the sleeve lining, need not be shade marked. Shade mark the parts of the sleeve lining whether cut from ends or in the main lay. Start the numbering for all parts at all times from the same position; for example, if the top ply is numbered one, all parts in the top ply and the next ply below shall be numbered one.					
4.	Make sleeves. a. Join the forearm of each sleeve with a 3/8-inch seam.	301	SSa-l	10-14	A	A
	b. Press the forearm seam of each sleeve open and flat, holding the folding line of the top sleeve short.

4. QUALITY ASSURANCE PROVISIONS

4.1 Responsibility for inspection. Unless otherwise specified in the contract or purchase order, the contractor is responsible for the performance of all inspection requirements as specified herein. Except as otherwise specified in the contract or purchase order, the contractor may use his own or any other facility suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure supplies and services conform to prescribed requirements.

NOTE: Stitch class 800 shall be formed with one or more needle threads and has a general characteristic that the thread does not interloop with itself or any other thread or threads. The thread is passed completely through the material by means of a double pointed center eye needle and returned by another path. Stitch class 800 simulates hand stitching.

Stitch type 801 shall be formed with one needle thread which is passed completely through the material and returned by another path after the material has been moved forward one stitch length.

FIGURE 1. Stitch type 801.

TABLE IV. Finished measurements (inches). - Continued

- $\frac{1}{2}$ Measure the 1/2 bust at the underarm, with the coat buttoned, across the front from armhole to armhole.
- 2/ Measure the back length from the center back, bottom of the under collar to the finished hem.
- $\frac{3}{}$ Measure the sleeve inseam, along the sleeve inseam, from the armhole seam to the bottom of the sleeve.
- 4.1.1 Responsibility for compliance. All items shall meet all requirements of sections 3 and 5. The inspection set forth in this specification shall become a part of the contractor's overall inspection system or quality program. The absence of any inspection requirements in the specification shall not relieve the contractor of the responsibility of assuring that all products or supplies submitted to the Government for acceptance comply with all requirements of the contract. Sampling in quality conformance does not authorize submission of known defective material, either indicated or actual, nor does it commit the Government to acceptance of defective material.
- 4.1.2 <u>Certificate of compliance</u>. Where certificates of compliance are submitted, the Government reserves the right to check test such items to determine the validity of the certification.
- 4.2 <u>Classification of inspections</u>. The inspection requirements specified herein are classified as follows:
 - a. First article inspection (see 4.4).
 - b. Quality conformance inspection (see 4.5).
- 4.3 <u>Inspection conditions</u>. Unless otherwise specified, all inspections shall be performed in accordance with the test conditions specified in FED-STD-191 or MIL-STD-1608, as applicable.
- 4.4 <u>First article inspections</u>. When a first article is required (see 6.2), it shall be examined for the defects specified in 4.5.3. The presence of any defect shall be cause for rejection of the first article.
- 4.5 Quality conformance inspection. Unless otherwise specified, sampling for inspection shall be in accordance with MIL-STD-1608.
- 4.5.1 <u>Components and material inspection</u>. In accordance with 4.1, components and materials shall be inspected in accordance with all the requirements of referenced documents unless otherwise excluded, amended, modified, or qualified in this document or applicable purchase document.

4.5.1.1 Component testing. In addition to any testing required by 4.5.1, components shall be tested as shown in table V for the characteristics noted. The methods of testing specified in FED-STD-191 and as listed in table V shall be followed. All test reports shall contain the individual values used in expressing the final results. The number of sample units to be tested shall be determined as follows:

Lot size		Sample size
•	and including 22,000	2 3
22,001 an	d over	5

The lot shall be unacceptable if one or more sample units fail to meet any test requirement specified. The lot size units and the sample units shall be as follows:

Component	Lot size unit	Sample Unit
Braid Gimp	Yard Bobbins when used	5 yards Sufficient number of
о т тр	(see NOTE)	bobbins to total a minimum of 360 yards.

NOTE: When threads are purchased in the form of cones or spools and on bobbins, gimp from each shall be tested.

- 4.5.2 <u>In-process inspection</u>. Inspection shall be made at any point or during any phase of manufacturing to determine whether operations or assemblies are accomplished as specified and to verify that the working patterns conform to the Government patterns in all respects. The Government shall reserve the right to exclude from consideration for acceptance any material or service for which in-process inspection has indicated nonconformance.
- 4.5.2.1 Examination of coat assembly. The coat shall be examined on its equivalent size model form to insure that the coat has been properly assembled to conform to the following:
 - a. The sleeves shall hang and balance evenly.
 - b. The front and the back of the sleeves shall have a roll effect.
 - c. The collar shall set snugly around the neck.
 - d. The collar edges shall not curl.
 - e. The fronts shall not overlap diagonally nor spread apart.
- f. Breaks, creases, or twists shall not be visible at the side or the shoulder.

Whenever nonconformance is noted, correction shall be made to the items affected, the lot in progress, and to the assembly of the coat. Parts which cannot be corrected shall be removed from production.

TABLE V. Component tests.

Component	Characterisitc	Requirement paragraph	Test method
Braid	Material identification	3.3.8	1200 or 1500 1/
	Width Breaking strength	3.3.8	5020
	(warp direction)	3.3.8	<u>2</u> /
	Colorfastness to: Dry cleaning Crocking	3.3.8 3.3.8	5622 5651
Gimp	Material identification	3.3.14	1100 or 1200 1/
	Finish Weight Color Colorfastness to:	3.3.14 3.3.14 3.3.14	Visual 4010 Visual
	Dry cleaning	3.3.14	5622

^{1/} A certificate of compliance is acceptable for this requirement.
2/ Test method shall be 5100 of FED-STD-191 except that the breaking strength shall be determined in the full wdith of the braid and the

iaw dimensions shall be greater than the width of the braid.

4.5.3 End item inspection

- 4.5.3.1 Individual examination. As a final step in the contractor's production control plan and before formation of a lot, each coat shall be buttoned on a model form and examined for those defects identified by an asterisk (*) and listed as selected defects in MIL-STD-1608. Any coat containing a selected defect shall not be included in an end item lot.
- 4.5.3.2 Point count inspection. After the coats have been subjected to the individual examination, sampling and inspection provisions for end item examination, dimensional examination, and packaging inspection shall be performed in accordance with MIL-STD-1608. Packaging inspection of hanger packs shall be in accordance with MIL-C-44192. The occurrence of defects during these examinations shall not exceed the applicable point value or defect limit specified.

4.5.3.3 Palletization examination. Examination shall be made to determine that the palletization complies with the section 5 requirements. Defects shall be scored in accordance with the list below. The sample unit shall be one palletized unit load fully packaged. The lot size shall be the number of palletized unit loads in the inspection lot. The inspection level shall be S-1 and the acceptable quality level, expressed in terms of defects per hundred units, shall be 6.5 as specified in MIL-STD-105.

Examine	Defects	
Finished dimensions	Length, width, or height exceeds specified maximum requirements.	
Palletization	Pallet pattern not as specified. Interlocking of loads not as specified. Load not bonded with required straps or film as specified.	
Weight	Exceeds maximum load limits.	
Marking	Omitted; incorrect; illegible; of improper size, location, sequence, or method of application.	

5. PACKAGING

- 5.1 <u>Preservation</u>. Preservation shall be level A, C, or Commercial, as specified (see 6.2).
- 5.1.1 Level A. Prior to packing, the shipping container shall be provided with an interior case liner made from polyethylene film having a minimum thickness of 0.003 inches. The open top of the liner shall be of sufficient length to completely cover the stack of coats when closed. The liner shall be closed by folding the top down onto the stack and securing with pressure sensitive tape or by means of a mechanical tie prior to closure onto the container. Each coat shall be buttoned and shall then be laid back down with the sleeves extending neatly across the front. The bottom of the coat shall be folded up even with the top of the collar. The folded coat shall be approximately 23 inches by 15 inches.
- 5.1.2 <u>Level C</u>. Each coat shall be preserved in accordance with MIL-STD-2073-1.
- 5.1.3 Commercial. Coats shall be preserved in accordance with ASTM D $\overline{3951}$.
- 5.1.4 Hanger packs. Coats shall be preserved as specified in MIL-C-44192.
- 5.2 Packing. Packing shall be level A, B, C, or Commercial as specified (see $\frac{6.2}{6.2}$).

- 5.2.1 Level A. Fifteen coats of one size, preserved as specified in 5.1, shall be packed flat in a shipping container conforming to class V2s, style RSC-L of PPP-B-636. The shipping container shall be fitted with a liner that is constructed of V15C fiberboard. The approximate inside dimensions of the shipping container shall be 23-1/1 inches long, 15-1/2 inches wide, and 15 inches deep. The closure of the shipping container shall be in accordance with method III of the appendix of the shipping container specification. Towards the end of the contract or order, or if the quantity of coats of the same size is less than the quantity of coats required per shipping container, mixed sizes (see 5.3.1) may be packed within the same shipping container.
- 5.2.2 Level B. Fifteen coats of one size only, preserved as secified in 5.1, shall be packed flat in a shipping container conforming to type CF or SF, class domestic, grade 175, variety SW, style RSC-L of PPP-B-636. The shipping container shall be fitted with a liner that conforms to type CF, variety SW, grade 200 of PPP-B-636. The approximate inside dimensions of the shipping container shall be 23-1/2 inches long, 15-1/2 inches wide and 15 inches deep. The closure of the box shall be in accorance with method II of the appendix of the shipping container specification. Towards the end of the contract or order, or if the quantity of coats of the same size is less than the quantity of coats required per shipping container, mixed sizes (see 5.3.1) may be packed within the same shipping container.
- 5.2.3 <u>Level C.</u> Fifteen coats of one size, preserved as specified in 5.1, shall be packed in accordance with MIL-STD-2073-1.
- 5.2.4 Commercial. Fifteen coats of one size, preserved as specified in 5.1, shall be packed in accordance with ASTM D 3951.
- 5.2.5 <u>Hanger pack</u>. Twelve coats of one size, preserved as specified in 5.1, shall be packed in a type I container using a style A or B hanger bar, in accordance with MIL-C-44192.
- 5.3 Palletization. When specified (see 6.2), coats packed as specified in 5.2, shall be palletized on a 4-way, type I, style 1, 1A, or 1B, size A, class 1 pallet fabricated in accordance with MIL-P-15011 or on a 4-way, type IV, V, or VIII, class 1, size 2, grade A pallet fabricated in accordance with NN-P-71. Each prepared load shall be in accordance with load type I or Ia and bonded with the applicable strap bonding or film bonding means specified in MIL-STD-147. The pallet pattern shall be in accordance with the appendix of MIL-STD-147. Interlocking of loads shall be effected by reversing the pattern of each course. If the container is of a size which does not conform to any of the patterns specified in MIL-STD-147, the pallet pattern used shall be approved by the contracting officer.
- 5.3.1 <u>Hanger pack</u>. When specified (see 6.2), coats packed as specified in 5.2, shall be palletized in accordance with the appendix of MIL-C-44192 using pallet load pattern number 95.

- 5.4 Marking. In addition to any special markings required by the contract or purchase order, the bagged unit packs, the shipping containers or hanger packs as specified (see 6.2), and the palletized unit loads shall be marked in accordance with MIL-STD-129, ASTM D 3951, or the appendix of MIL-C-44192, as applicable.
- 5.4.1 <u>Labels, mixed sizes</u>. Each shipping container or hanger pack that is packed with mixed sizes shall have securely attached to the end and side, directly under the printing, stenciling or arrows, a white paper label 5 by 4 inches with the words "MIXED NSN'S" plainly stamped or printed thereon and under these words shall be legibly stamped or printed the correct quantity and NSN's contained therein.

6. NOTES

6.1 <u>Intended use</u>. The pants suit coat is intended to be worn by female personnel of the Department of the Air Force.

6.2 Ordering data

- 6.2.1 Acquisition requirements. Acquisition documents should specify the following:
 - a. Title, number, and date of this specification.
 - b. Class, size and length required (see 1.2).
 - c. When a first article is required (see 3.2).
- d. Selection of applicable levels of preservation and packing (see 5.1 and 5.2).
 - e. When palletization is required (see 5.3).
 - f. When bar code markings are required (see 5.4).
- 6.3 <u>Samples</u>. For access to samples of the end item and shade samples, address the contracting activity issuing the invitation for bids.
- 6.4 First article. When a first article inspection is required, the item should be a first article sample, inspected and approved under the appropriate provisions of FAR 52.209-4. The first article should consist of one coat. The contracting officer should include specific instructions in acquisition documents regarding arrangements for examinations, approval of first article test results and disposition of first article. Invitations for bids should provide that the Government reserves the right to waive the requirement for samples for first article inspection to those bidders offering a product which has been previously acquired or tested by the Government, and that bidders offering such products, who wish to rely on such production or test, must furnish evidence with the bid that prior Government approval is presently appropriate for the pending contract.

- 6.5 Recycled material. It is encouraged that recycled material be used when practical as long as it meets the requirements of this document (see 3.3).
- 6.6 Subject term (key word) listing.

Coat, pant suit Coat, woman's

6.7 Changes from previous issue. Asterisks (*) are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (DO NOT STAPLE), and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
